I've created some Slackware template caches that are newer than the 2-year-old Slackware 12.0. To be honest, though, I've never used OpenVZ before today, so I apologize if I did some things wrong.

I found your templates very useful. Maybe you should consider emailing contrib@openvz.org so that they are listed on the openvz.org site?

I was inspired by these to create one myself - an i386 Slackware 13.0

I actually didn't know where to go to get them listed, but that sounds like a good idea.

Saves bandwidth if nothing else

I think they get copied to mirror sites automatically, once they've been wget(ed onto downloads.openvz.org
