Hello,

Lately I got this problem sometimes.

vzlist shows:

```
5380      1 running 10.10.10.10  t2server
```

1 proccess only?

ok I try to reboot:

```
vzctl restart 5380
```

Restarting VE

Stopping VE ...

Unable to stop VE: operation timed out

```
[root@server ~]#
```

I enter this vps and shutdown it without problem:

```
entered into VE 5380
```

```
t2server:/#
```

```
t2server:/#
```

```
t2server:/# ps aux
```

```
USER      PID %CPU %MEM  VSZ  RSS TTY   STAT START  TIME COMMAND
root      1 0.0 0.0  1952  664 ?     Ss   Jun05  0:00 init [6]
root     7916 0.0 0.0  1768  404 ?     Ss  10:41  0:00 vzctl: pts/0
root     7917 0.0 0.1  2728 1524 pts/0  Ss  10:41  0:00 -bash
root     7921 0.0 0.0  2220  892 pts/0  R+  10:41  0:00 ps aux
```

```
t2server:/# shutdown -h now
```

```
t2server:/#
```

```
t2server:/#
```

```
t2server:/#
```

```
t2server:/# dgot signal 9
```

```
        exited from VE 5380
```

What might be the issue?

I started this vps without problem later.

Kernel

```
[root@server ~]# uname -r  
2.6.18-92.1.18.el5.028stab060.8PAE  
[root@server ~]#
```

ps. I have changed IP for security reasons.
