Just wondering about kernel development. The latest kernel posted here is 2.6.27 and 2.6.30 is now out. I was wondering if OpenVZ is going to come out with something newer?

We'll definitely do the port to RHEL6 kernel — the problem is nobody knows which version of vanilla kernel it will be based on. Probably 2.6.30, but we need to be more sure…)

That's strange. On a shrinking show you would think they would increase it just to fill up space.
