Subject: Memory problems
Posted by SamTzu on Fri, 12 Jun 2009 18:53:53 GMT

I have been having problems with one our servers. It seems to consume more memory and crashes after a while. I had to add more memory for the Virtual Container. How can the VC use more memory than is allocated to it? How can I make sure that it does not use more memory than it has been given?

Jun 12 10:18:01 server49 /usr/sbin/cron[2019]: (CRON) error (can't fork)
Jun 12 10:18:56 server49 postfix/master[1184]: warning: master_spawn: fork: Cannot allocate memory -- throttling
