Hello,

We have one OpenVZ VPS . After running ifconfig we see IPs configured at venet0:0 . We have CSF installed on it.

Now in csf.conf we have following set

```
=====
# Allow incoming TCP ports
TCP_IN = "22,443,5060,5061"

# Allow outgoing TCP ports
TCP_OUT = "21,80,5060,5061,443"

# Allow incoming UDP ports
UDP_IN = "20,21,53,5060,443"

# Allow outgoing UDP ports
# To allow outgoing traceroute add 33434:33523 to this list
UDP_OUT = "20,21,53,113,123,5060,443"
=====
```

But these rules don't apply and we are not able to use any of the port on the VPS. Any solutions on this ????

sachin

I know a bit about this.

Have you run the csf iptables test script?

Whats the output?
