Hi all,
today i've had a raid failure and after rebuilding the array one container refused to start.
This is the error:
vzctl start 420
Starting container ...
Initializing quota ...
vzquota : (error) quota check : lstat `libmccrypt-2.5.8': No such file or directory
vzquota init failed [1]
Now i've tried all the method dropping the quota file turing on and off the quota, and nothing,
doesn't work.
I've tried rebuilding the quota on another container and verything went fine, so what does it means
"quota check : lstat `libmccrypt-2.5.8': No such file or directory"? it can't rebuild the quota because
doesn't find libmccrypt inside the container?
Sadly this is the vps of one my valued customer and we are already at 3 hours of downtime.
Any help is very much appreciated.
Thanks in advance.

It may be a file system corruption.
Try running fsck utility.
