Hi,

I follow this tutorial [http://wiki.openvz.org/HA\\_cluster\\_with\\_DRBD\\_and\\_Heartbeat](http://wiki.openvz.org/HA_cluster_with_DRBD_and_Heartbeat) to build such like system;

HN OS: Debian Lenny 5.0.1 with iptables support

Kernel: 2.6.26-2-openvz-686

DRBD: drbd8-modules-2.6.26-2-openvz-686 2.6.26+8.0.14-6+lenny1

HB: heartbeat 2.1.3-6lenny1

VZCTL: vzctl 3.0.22-14

CTz: Debian Lenny 5.0.1 without iptables support

HN IP: inner iface aka eth1 10.0.1.1

CT0 IP: veth 10.0.1.2

CT1 IP: veth 10.0.1.3

at the end of the configuration CT0 doesn't see CT1, intranet machines and internet, only the firewall inner iface: eth1,

so getting this doc [http://wiki.openvz.org/Common\\_Networking\\_HOWTOs](http://wiki.openvz.org/Common_Networking_HOWTOs) and another one [http://wiki.openvz.org/Using\\_private\\_IPs\\_for\\_Hardware\\_Nodes](http://wiki.openvz.org/Using_private_IPs_for_Hardware_Nodes), but no luck,

is this possible to bring on CT-s on the same subnet with Uniq Public IP without PrivateIP, and CTs working on Intranet like any other machine?!

thanx any regards,

Cheers;

Roland
