Hey,

I would like to install OpenVZ from the sources. I am running a Debian 5.0 Lenny and I am following this tutorial:

http://wiki.openvz.org/Compiling_the_OpenVZ_kernel_%28the_Debian_way%29 But I can not find this package: linux-patch-openvz. The apt-get install command returns:Package linux-patch-openvz is not available, but is referred to by another package.

This may mean that the package is missing, has been obsoleted, or is only available from another source

E: Package linux-patch-openvz has no installation candidate

I don't see any other way to proceed, as the apt-cache search command doesn't return anything neither.

How can I compile my own openvz kernel?

Thanks for your help!
