---

I am looking for the openvz kernel for my fedora 9 on Soekris net5501 hardware. (<http://www.soekris.com/net5501.htm>)

Soekris net5501 has a 500 Mhz AMD Geode LX single chip processor. It is compatible to i586 architecture.

I don't know which version of openvz kernel I should use. It seems all stable kernels are for i686. I am not sure if openvz is supporting hardwares with i586 cpu now.

I don't have to use fedora, so if I can use openvz on any Linux Distribution (e.g. Ubuntu, Fedora, Debian) it would be fine.

Can anybody recommend a specific openvz kernel for this Soekris net5501 hardware? I would appreciate any advice.
