
Subject: Problems with local network interface
Posted by [ThatGuy](#) on Sat, 04 Jul 2009 16:50:15 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi,

My HN has two interfaces, one going to the public net and the other to our private net.

public: A.B.C.220

private: 192.168.0.15

I've given my VE two ip address, one for each network, everything works fine for the public net... but I'm having trouble with the private net.

public: A.B.C.221

private: 192.168.0.221

When I ping from the VE to a machine on the private net I don't get anything back.

Tcpdump on the HW node (local eth) show that echo requests are sent from the VE's public address to the private address of the

remote machine (bit strange?)... and no return packets...

HN: tcpdump -i eth0 -e host 192.168.0.14

```
11:04:12.019310 00:0d:60:d5:ef:06 (oui Unknown) > 00:1a:4b:e8:11:26 (oui Unknown), ethertype IPv4 (0x0800), length 98: A.B.C.221 > 192.168.0.14: ICMP echo request, id 525, seq 1, length 64
11:04:13.026360 00:0d:60:d5:ef:06 (oui Unknown) > 00:1a:4b:e8:11:26 (oui Unknown), ethertype IPv4 (0x0800), length 98: A.B.C.221 > 192.168.0.14: ICMP echo request, id 525, seq 2, length 64
11:04:14.026183 00:0d:60:d5:ef:06 (oui Unknown) > 00:1a:4b:e8:11:26 (oui Unknown), ethertype IPv4 (0x0800), length 98: A.B.C.221 > 192.168.0.14: ICMP echo request, id 525, seq 3, length 64
```

Pinging from the HN to 192.168.0.14 works fine.

I'm not sure what's going on. This is a clean HN install of ubuntu 8.04 with a clean VE install of debian 5, haven't even touched iptables yet.

I'm not completely new to networking, but this is beyond me. Help is greatly appreciated

The same problem that I was posted on

<http://forum.openvz.org/index.php?t=msg&th=7705&star t=0&>

You've discovered anything?

No, I'm still in the dark as well...

Since this isn't causing any mission critical problems for me it's not a show stopper... But it would be nice if someone knows how to fix it.

Hello,

could you please try the commands suggested in the thread mentioned above?

```
192.168.0.221 0.0.0.0      255.255.255.255 UH  0   0   0 venet0
A.B.C.221 0.0.0.0      255.255.255.255 UH  0   0   0 venet0
A.B.C.216 0.0.0.0      255.255.255.248 U  0   0   0 eth1
192.168.0.0 0.0.0.0      255.255.255.0  U  0   0   0 eth0
0.0.0.0     A.B.C.217 0.0.0.0      UG  100  0   0   0 eth1
```

HN: ifconfig

```

Hi,

please excuse my being so vague.

I mean to set an explicit routes, something similar to what was suggested in previous thread

Quote:

(inside VE)

```
# ip r add 10.0.0.0/24 dev venet0 src 10.0.0.155
```

```
# ip r add 77.178.25.0/24 dev venet0 src 77.178.25.145
```

Ohhh.... no, seriously I'm to blame for not having seen the second post in that thread...

That fixed it

How would I make this permanent across reboots? Should I add the commands to the rc.local inside the virtual machine...

Is the rc.local executed when the virtual machine starts up?

Hi,

Quote:

How would I make this permanent across reboots? Should I add the commands to the rc.local inside the virtual machine...

Is the rc.local executed when the virtual machine starts up?

Yes, rc.local is executed during the startup.
