Subject: Add iptable module for a container/VPS

Hello,

This is one of the things that I have not been able to find on the web for a few months, how to give containers ip table modules.

I have three virtual private servers running on my dedicated server yet some programs I want to use require iptables modules such as the following....

iptable_nat
ipt_REDIRECT
ipt_owner
ipt_limit
ipt_state
ipt_LOG

How would I go about installing these on the master node and then giving them to my VPS's/Containers? (I currently use HyperVM)

Thanks in advanced!
