I am currently using ubuntu 8.10, and trying to install openvz.
Ive looked through this web site.
 http://www.howtoforge.com/installing-and-using-openvz-on-ubu ntu-8.10

i added "deb http://download.openvz.org/debian-systs lenny openvz" to /etc/apt/sources.list
and then run "wget -q http://download.openvz.org/debian-systs/dso_archiv_signing_k ey.asc -O-
| apt-key add - && apt-get update"

after that, to check what I have related to openvz, i run "apt-cache search openvz"
but all I got was:
vzctl - OpenVZ - server virtualization solution - control tools
vzctl-ostmpl-debian-4.0-i386-minimal - OpenVZ - OS Template debian-4.0-i386-minimal
vzctl-ostmpl-debian-5.0-i386-minimal - OpenVZ - OS Template debian-5.0-i386-minimal
vzquota - OpenVZ - server virtualization solution - quota tools

I cannot find any kernel for OpenVZ.
Does anyone know how to install OpenVZ on Ubuntu8.10? or how to solve this problem?

Thank you in prior for your help:)
