So im facing some strange issue with openvz i have never seen.

Seems like inside one of my vps dist quotas do not work.

kernel: 2.6.18-92.1.18.el5.028stab060.2PAE

/etc/vz/conf/***.conf has:

Disk quota parameters (in form of softlimit:hardlimit)

DISKSPACE="51200000:51200000"

DISKINODES="25600000:25600000"

QUOTATIME="0"

while inside vps i see:

df -h

Filesystem	Size	Used	Avail	Use%	Mounted on
/dev/simfs	452G	393G	36G	92%	/

whole system.. and user can actually use whole server hdd space to store files.

Strange.

1. Use vzquota utility on the HN.

2. Show "ls -l /etc/mtab" output from that VE.

3. Quote:

and user can actually use whole server hdd space to store files.

Are you sure about this?

/etc/mtab should be symlink to /proc/mounts
