Subject: Howto clear beancounters of migrated CTs
Posted by DSI-Zoebisch on Tue, 25 Aug 2009 07:45:39 GMT

Hi there.

I have four openvz servers and can migrate the containers between these four servers. But i have one problem...if i migrate a container from server1 to server2 the beancounters of the migrated container still exists on server1. How can i remove /proc/bc/<ct-id> without a restart of server1?

Systems are all Debian Etch with Kernel 2.6.18-openvz-amd64 from download.openvz.org

Thank you
