
Subject: Problem with /proc/vz/veinfo

Posted by [Rachid Abdoun](#) on Thu, 29 Jun 2006 15:28:36 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi,

I'm running a debian sarge 3.1 with kernel 2.6.16 with this patch
[http://download.openvz.org/kernel/devel/026test014.4/patches /](http://download.openvz.org/kernel/devel/026test014.4/patches/patch-026test014-combined.gz)
patch-026test014-combined.gz and i installed the latest tools :

```
phoenix:~# vzctl --version  
vzctl version 3.0.10
```

```
phoenix:~# vzquota --version  
Vzquota version 2.5.0
```

when i list the virtual personal servers i have this errorS :

```
phoenix:~# vzlist  
Unable to open /proc/vz/veinfo  
VPS not fouun
```

and when I stop a server I have this :

```
phoenix:~# vzctl stop 101  
Unable to open /proc/vz/veinfo: No such file or directory  
Stopping VPS ...
```

what's happen? Could someone help me?

Thank you

Looks like OpenVZ kernel modules are not loaded.

Have you started vz subsystem? I mean running
/etc/init.d/vz start

Yes I did :

```
phoenix:~# /etc/init.d/vz start
Starting OpenVZ: ..done
phoenix:~# vzlist
Unable to open /proc/vz/veinfo
VPS not found
```

I'm running debian sarge 3.1 what can I do?

Hi,

have you build your own kernel and enabled the modules needed
for openvz ?

Yes i build myself

I use this config <http://download.openvz.org/kernel/devel/>

026test014.4/configs/kernel-2.6.16-026test014-i686.config.ov z to
build it....

What can I do?

Thank you

Hi,

More questions: :-)

Boot your system the right kernel -> have you modified your bootloader
e.g. grub or lilo ?

Which version show "uname -r" ?

Are the modules "vzmon vxdquota vzdev" loaded ?

Are the modules on the right place :
/lib/modules/`uname -r`/kernel/kernel/vzmon.ko
/lib/modules/`uname -r`/kernel/fs/vxdquota.ko
/lib/modules/`uname -r`/kernel/kernel/vzdev.ko

Can load manually the module above, and listed by lsmod ?

have you booted OVZ kernel?
check that correct kernel and modules are loaded:
uname -a
lsmod
modprobe vzmon

Thanks,
Kirill

Hi,

More responses: :-)

Boot your system the right kernel -> have you modified your bootloader
e.g. grub or lilo ?

I use grub check my menu.lst :

```
title      OpenVZ , kernel 2.6.16-026test014
root      (hd0,0)
kernel    /vmlinuz-2.6.16-026test014 root=/dev/hda7 ro
savedefault
boot
```

```
title      OpenVZ , kernel 2.6.16-026test014 (recovery mode)
root       (hd0,0)
kernel     /vmlinuz-2.6.16-026test014 root=/dev/hda7 ro single
savedefault
boot
```

```
title      Debian GNU/Linux, kernel 2.6.8-2-386
root       (hd0,0)
kernel     /vmlinuz-2.6.8-2-386 root=/dev/hda7 ro
initrd     /initrd.img-2.6.8-2-386
savedefault
boot
```

```
title      Debian GNU/Linux, kernel 2.6.8-2-386 (recovery mode)
root       (hd0,0)
kernel     /vmlinuz-2.6.8-2-386 root=/dev/hda7 ro single
initrd     /initrd.img-2.6.8-2-386
savedefault
boot
```

Which version show "uname -r" ?

```
phoenix:~# uname -r
2.6.16-026test014
```

Are the modules "vzmon vxdquota vzdev" loaded ?

```
phoenix:~# lsmod | grep vzmon
vzmon          45984  2 vzrst,vzcpt
vzdev          2468  2 vxdquota,vzmon
```

```
phoenix:~# lsmod | grep vxquota
=> Nothing!
```

Are the modules on the right place :

```
/lib/modules/`uname -r`/kernel/kernel/vzmon.ko
```

```
bash: /lib/modules/2.6.16-026test014/kernel/kernel/vzmon.ko:
Permission non accord?e
```

```
/lib/modules/`uname -r`/kernel/fs/vxdquota.ko
```

```
bash: /lib/modules/2.6.16-026test014/kernel/fs/vxdquota.ko:
Permission non accord?e
```

```
/lib/modules/`uname -r`/kernel/kernel/vzdev.ko
```

```
bash: /lib/modules/2.6.16-026test014/kernel/kernel/vzdev.ko:
```

Permission non accord?e

I still have a problem :

```
phoenix:~# vzctl start 101
Starting VPS ...
VPS is mounted
Adding IP address(es): 192.168.2.1
Unable to add IP 192.168.2.1: Inappropriate ioctl for device
Unable to del IP 192.168.2.1: Inappropriate ioctl for device
VPS start failed
Stopping VPS ...
VPS was stopped
vzquota : (error) Quota off syscall for id 101: Device or resource busy
vzquota off failed [3]
```

Conf file of 101 :

```
phoenix:~# cat /etc/vz/conf/101.conf
# Copyright (C) 2000-2006 SWsoft. All rights reserved.

phoenix:~#
```

Can load manually the module above, and listed by lsmod ?

Yes but that don't resolve the problem...

Why can I do? Thanks!!!

Rachid

It looks like vznetdev module is not loaded. Try loading it manually:

/sbin/modprobe vznetdev

Subject: Re: Problem with /proc/vz/veinfo
 Posted by [Rachid Abdoun](#) on Wed, 05 Jul 2006 18:03:44 GMT
[View Forum Message](#) <> [Reply to Message](#)

I don't think :

```

phoenix:~# lsmod | grep vz
vzrst          122992  0
ip_nat         14644  1 vzrst
vzcpt          99392  0
ip_conntrack   49448  3 vzrst,ip_nat,vzcpt
vzdquota       39028  0 [permanent]
vzmon          45984  2 vzrst,vzcpt
vzdev          2468  2 vzdquota,vzmon

```

```

phoenix:~# modprobe vznetdev

```

```

phoenix:~# lsmod | grep vz
vznetdev       13856  0

```

```
vzrst      122992 0
ip_nat     14644 1 vzrst
vzcpt      99392 0
ip_contrack 49448 3 vzrst,ip_nat,vzcpt
vzdquota   39028 0 [permanent]
vzmon      45984 3 vznetdev,vzrst,vzcpt
vzdev      2468 3 vznetdev,vzdquota,vzmon
```

```
phoenix:~# vzctl start 101
Starting VPS ...
VPS is mounted
Setting CPU units: 1000
Set hostname: vps101
File resolv.conf was modified
Processing veth devices
Warning: veth feature is not supported by kernel, skipped veth configure
VPS start in progress...
```

101.conf :

```
