Hi,

I'm seeing this message in /var/log/messages:

```
Aug 24 20:34:27 alojamento vzquota: quotaon: using //aquota.group on /dev/simfs  
[/: Device or resource busy
```

```
Aug 24 20:34:27 alojamento vzquota: quotaon: using //aquota.user on /dev/simfs  
[
```

```
/]: Device or resource busy
```

```
Aug 24 20:34:27 alojamento rc: Starting vzquota: failed
```

This appears to be an issue with second level quotas on the vps host

So , i have root access to master server, i have veportal installed.

and i need to repair this problem, what i need to do?

thanks for all help

best regards
flavio rodrigues
