Hi,

I'm trying to use the vzctl chkpnt/restore commands.

Here is what I get :

1st chkpnt OK

```
sudo vzctl chkpnt 100 --dumpfile dump1
Setting up checkpoint...
suspend...
dump...
kill...
VE is unmounted
Checkpointing completed succesfully
```

restore OK

```
sudo vzctl restore 100 --dumpfile dump1
Restoring VE ...
Warning: distribution not specified default used /etc/vz/dists/default
Starting VE ...
VE is mounted
undump...
Setting CPU units: 10561
Configure meminfo: 138288
Configure veth devices: hnsTap0 hnsTap1
resume...
VE start in progress...
Restoring completed succesfully
```

2nd chkpnt fails:

```
sudo vzctl chkpnt 100 --dumpfile dump1
Setting up checkpoint...
suspend...
dump...
Can not dump VE: Invalid argument
Error: d_path is invisible /var/lock
Checkpointing failed
```

What is the problem with /var/lock ?

```
ls -lh /var/lock
total 0
drwxr-xr-x 2 www-data root 40 2009-09-10 09:15 apache2
-rw-r--r-- 1 root   root 0 2009-09-10 09:15 vz
```

Thanks

Please, file a bug
<http://bugzilla.openvz.org/>
Thank you.

Hi,

the bug report is here:
http://bugzilla.openvz.org/show_bug.cgi?id=1330

Subject: Re: chkpnt: Error: d_path is invisible /var/lock

Many thanks for reporting about the problem.
The only point I want to note is that in my opinion the core problem relates to kernel rather than vzctl. So if you want you may reassign this bug directly to kernel assignee.
