I'm searching Linux Headers!

I'm running VPS with Debian etch ! But i cant find the right Linux Headers!

```
uname -a:  
Quote:2.6.18-128.2.1.el5.028stab064.7 #1 SMP Wed Aug 26 15:47:17 MSD 2009 i686  
GNU/Linux
```

```
apt-get install linux-headers-`uname -r`:  
Quote:E: Konnte Paket linux-headers-2.6.18-128.2.1.el5.028stab064.7 nicht finden
```

Where can i find the right Headers. I need them for compiling ...

Thanks

Hi,

the Hostnode is running the RHEL based last stable OpenVZ Linux kernel, you can found the src on <http://download.openvz.org/kernel/branches/rhel5-2.6.18/028stab064.7/>.

Btw, why are you need kernel src to build modules, you can't load any kmods in your container atn the hardware node or with special kernel capabilities given by the hostnode admins.

Bye,
Thorsten
