
Subject: porting stable patch to higher kernel versions

Hi folks,

I'm currently trying to port the current stable patch to an
higher kernel version.

2.6.8.1 was trivial, since there was just some patchlet added
vom 2.6.8 to .1, which is already included in the ovz patch.

2.6.9 seems to be more tricky. There're lots of rejects.
Many things don't seem to be ovz stuff actually, ie. i2o.

cu
