---

I have one physical host ("myhost.org") with an IP number. I cannot have more IP numbers to address the OpenVZ guests running inside the host, because I am only one of many users of our subnet.

Is it still possible to address the four guests (www,mysql,ws1,ws2) like

www.myhost.org

mysql.myhost.org

ws1.myhost.org

ws2.myhost.org?

If yes, how is this done? It would be great, if you can suggest a kind of tutorial. Or if such a tutorial does not exist, please give a few suggestions, what I could do.

Thank you very much

Alex
