I did many manuals to get a bridge, but none is working fine to me

Please could somebody say me How can I get internet in my container?

Best Regards

Hello,

the question asked is rather vague to answer it precisely.

What exactly is your configuration? What exactly have you tried to do? What kind of errors did you get?

Without any specific information I only can suggest you to look through existing documents e.g.

<http://forum.openvz.org/index.php?t=msg&th=5501&star t=0&>

<http://wiki.openvz.org/Venet>

<http://wiki.openvz.org/Veth>

Please be more specific and it may help other people to realize your problem and find an answer.
