My company is just starting to use OpenVZ and we need to find out:

Can Eucalyptus can manage the processes that are going on in the containers in OpenVZ?

You mean you want to know if you can run OpenVZ containers as Eucalyptus VMs - like you can with Xen and KVM machines?

AFAIK you can't , although I think It would be great since with OpenVZ you can run much more VMs than with XEN or KVM.

Anyway this question if for Eucalyptus forums not OpenVZ.
