Hi *,

in a Suse-6.3 Container the KSH doesn't work correctly :

dhsrv08:~ # ksh
ksh: j_init: tcgetpgrp() failed: Inappropriate ioctl for device
ksh: warning: won't have full job control
\h:\w #
\h:\w # dhsrv08:/usr/fib1 # tty
/dev/pts/0

Host OS is Debian (Proxmox), Kernel 2.6.24-7-pve.

Joachim

How did you accessed a container? vzctl exec? vzctl enter? ssh?

Please file it as a bug to bugzilla.openvz.org. Strace of ksh would be helpful, too.
