Dear Sir or Madam,
i am new with openVZ and linux! my name is Philipp P. and Im from Germany. I have big
problems.
I created two vz's.

But yesterday u upgraded my kernel to Cent OS 5.3(final) and no nothing is working. I stopped the
kernel, but i can't start it again.
These is the message:

Starting container ...
Container is mounted
Adding IP address(es): 64.120.180.4
bash: line 511: mkdir: command not found
bash: line 524: rm: command not found
bash: line 526: rm: command not found
Setting CPU units: 1000
Configure meminfo: 965536
Set hostname: vm303.server.cams4friends.com
bash: line 316: /bin/cp: No such file or directory
 ERROR: Can't copy file /etc/hosts
Unable to start init, probably incorrect template
Container start failed
Stopping container ...
Container was stopped
Container is unmounted

Could be the upgraded Kernel Version the Problem? The templates are created with Cent OS 5.2!

And I always get This message:

uname -r give me this info:

2.6.18-128.2.1.el5.028stab064.8

What can I do
Can anybody help me??

Greetz,
Phil
