I went to login today and when I hit "login" the browser shows a loading bar for ages and then eventually errors out

I have looked in /var/log/messages and the web access and error logs and I cant see anything

I have restarted Apache and still I have the same problem

Where should I look next?

Many thanks

PS running V 1.4

I think you might be at the wrong forum. Openvz itself has no web interface... Are you using proxmox? You should probably refer to their site for support.
