---

Has anyone else had this issue lately? I've installed openvz a million times (always on Centos 64-bit) and I've never ran into this...

After adding the openvz repo, yum isn't finding the 64 bit kernel at all:

```
#####
[root@customer ~]# yum install ovzkernel.x86_64
Loaded plugins: fastestmirror
Loading mirror speeds from cached hostfile
* addons: ftp.osuosl.org
* base: ftp.osuosl.org
* extras: centosk.centos.org
* openvz-kernel-rhel5: mirrors.unbornmedia.com
* openvz-utils: mirrors.unbornmedia.com
* updates: ftp.osuosl.org
Setting up Install Process
No package ovzkernel.x86_64 available.
Nothing to do
#####
```

The repo is definitely enabled...

```
#####
[root@customer ~]# yum repolist
Loaded plugins: fastestmirror
Loading mirror speeds from cached hostfile
* addons: ftp.osuosl.org
* base: ftp.osuosl.org
* extras: centosk.centos.org
* openvz-kernel-rhel5: mirrors.unbornmedia.com
* openvz-utils: mirrors.unbornmedia.com
* updates: ftp.osuosl.org
repo id          repo name          status
addons           CentOS-5 - Addons    enabled: 0
base             CentOS-5 - Base     enabled: 2,535
extras           CentOS-5 - Extras   enabled: 325
openvz-kernel-rhel5      OpenVZ RHEL5-based kernel  enabled: 14
openvz-utils       OpenVZ utilities    enabled: 26
updates           CentOS-5 - Updates  enabled: 278
repolist: 3,178
#####
```

Anyone have a suggestion? Am I missing something obvious here?

I think the package is defined as "vzkernel" in some repos.

Try "yum search vzkernel" after enabling the correct repo for your distribution. Then, probably, you are going to find what you are want to install.

thanks. you are correct  
problem solved  
i found the detailed instruction on the following link  
[http://www.howtoforge.com/installing-and-using-openvz-on-cent os-6.0](http://www.howtoforge.com/installing-and-using-openvz-on-centos-6.0)
