Has anyone else had this issue lately? I've installed openvz a million times (always on Centos 64-bit) and I've never ran into this...

After adding the openvz repo, yum isn't finding the 64 bit kernel at all:

```
#####  
[root@customer ~]# yum install ovzkernel.x86_64  
Loaded plugins: fastestmirror  
Loading mirror speeds from cached hostfile  
* addons: ftp.osuosl.org  
* base: ftp.osuosl.org  
* extras: centosk.centos.org  
* openvz-kernel-rhel5: mirrors.unbornmedia.com  
* openvz-utils: mirrors.unbornmedia.com  
* updates: ftp.osuosl.org  
Setting up Install Process  
No package ovzkernel.x86_64 available.  
Nothing to do  
#####
```

The repo is definitely enabled...

```
#####  
[root@customer ~]# yum repolist  
Loaded plugins: fastestmirror  
Loading mirror speeds from cached hostfile  
* addons: ftp.osuosl.org  
* base: ftp.osuosl.org  
* extras: centosk.centos.org  
* openvz-kernel-rhel5: mirrors.unbornmedia.com  
* openvz-utils: mirrors.unbornmedia.com  
* updates: ftp.osuosl.org  
repo id          repo name          status  
addons           CentOS-5 - Addons  enabled:  0  
base             CentOS-5 - Base    enabled: 2,535  
extras           CentOS-5 - Extras  enabled:  325  
openvz-kernel-rhel5 OpenVZ RHEL5-based kernel enabled:  14  
openvz-utils      OpenVZ utilities   enabled:  26  
updates          CentOS-5 - Updates enabled:  278  
repolist: 3,178  
#####
```

Anyone have a suggestion? Am I missing something obvious here?

I think the package is defined as "vzkernel" in some repos.

Try "yum search vzkernel" after enabling the correct repo for your distribution. Then, probably, you are going to find what you are want to install.

thanks. you are correct
problem solved
i found the detailed instruction on the following link
[http://www.howtoforge.com/installing-and-using-openvz-on-cent os-6.0](http://www.howtoforge.com/installing-and-using-openvz-on-cent-os-6.0)
