Subject: LVM mounted to /vz ?

Hi, I have 2 disk drives and was wondering what is the best way to utilize them both in the OpenVZ enviroment.

Do I mount one to /vz and the other to /vz2 or should create an LVM out of both of the drives and mount that to just /vz

Would this affect my VEs' ability to reboot itself since logical volumes can't be booted into?

Nevermind, LVM mounted to /vz works fine
