Subject: Multiple Networks on OpenVZ
Posted by sandesh on Fri, 18 Dec 2009 19:52:20 GMT

I would like to configure multiple networks on my openvz server which is having 3 Ethernet cards, and my networks are like 192.x.x.x 172.x.x.x and 10.x.x.x

So how should I host multiple containers with different network schemes.

Can you help me here.. it's URGENT

Thanks in advance
Sandesh

Hi,

sorry for delay.
I would recommend you to start with the following pages
http://wiki.openvz.org/Category:Networking
 http://wiki.openvz.org/VEs_in_different_subnets#.283.29_Putt ing_VEs_to_different_subnetworks

You'd better learn some basic concepts at first.
It's not clear what network configuration you want to set up.
It would be great if you are able to describe what you want to achieve.
