Subject: can't write into /var/cpanel/userdata/king/main.cache
Posted by CleberDantas on Sat, 19 Dec 2009 02:24:20 GMT

Hello all,

I installed vps with centos5 and installed cpanel normal, created accounts, etc.

I want update apache via WHM, and receive message:

can't write into /var/cpanel/userdata/king/main.cache: No such file or directory at /usr/local/cpanel/Cpanel/CachedDataStore.pm line 73 !! '/usr/local/cpanel/bin/userdata_update' failed with exit code '2304' !! -process complete-

Permission in file main.cache is:

?--------- ? ? ? ? ? main.cache

What solution?

Thanks!

I don't see what has this to do with OpenVZ..? You'll probably get a better answer at some Cpanel forum.
