Subject: OS template creation
Posted by wyndryder on Sun, 09 Jul 2006 22:07:38 GMT

Could anyone point to an article or document explaining how one would go about creating a precreated OS template for fedora 4 64?

i believe you could get FC4 template meta data sources, compile, install it and by using vzpkgcache you should be able to create FC4 x86_64 template. I'm not sure though - don't have x86_64 host to test :-/

From changelog:
* Mon Oct 10 2005 Kir Kolyshkin <kir-at-openvz.org> 2.0-1
- added support for mulitple architectures

So looks like it should work okay.
