Hi Guys, i have this problem,

kernel panic after iptables and vz restart

how can i fix it?? i was reading the bugzilla, but dont know how to fix.

please help!!!

Hi,

please post more info:

... used OpenVZ kernel:

\$ cat /proc/vz/version

... kernel oops

output of kernel oops

... steps to reproduce

Bye,

Thorsten

... used OpenVZ kernel:

\$ 028stab060

... kernel oops

i do the steps on the wiki:

To determine whether your system has had an oops or not, grep your logs:

grep -E "Call Trace|Code" /var/log/messages*

and i dont get info back.

... steps to reproduce

Problem Solved!

patch works, and OpenVZ guys are the best!
