---

Is it possible that the new kernels can have OCFS2 support compiled in?

It's impossible to compile OCFS2 and make it work on the following VZ kernel:

2.6.18-128.2.1.el5.028stab064.7PAE

If anyone has any tips for making this work I'd appreciate it.

insmod: error inserting

'/lib/modules/2.6.18-128.2.1.el5.028stab064.7PAE/extra/ocfs2 /dlm/ocfs2\_dlmfs.ko':  
-1 Unknown symbol in module
