do you try to stop and start openvz???

also a load of 5 is not just for sending emails, maybe a php script is killing the VE, do you use any special panel there?? check the config of the control panel.

i mean, if you use a control panel for each VE, check config. also on each VE do a

#top

to see what process is taking a lot of resources

or do it in the main server and you can see wich server and process is doing that.
