Hi, I'm the newbie around here, but I would like to know if any one have made or try to make a template of OpenNas?

Thanks for your help.

OpenNAS is a BSD distro.

If you want OpenNAS,run it in a VM with VMware or Virtualbox,along side OVZ.

I run Windows 2003 server for LAN DNS on my Node server,using Virtualbox VRDP mode. Works great.

For anyone looking for a LINUX NAS,try "Openfiler".

A commercial grade NAS for "free",try NexentaStor,which is based on OpenSolaris.

The "free" part for NexentaStor,is simply registering the product.

Each of these,can be downloaded in *.iso format.
