Hardware Node: CentOS 5

2.6.18-164.2.1.el5.028stab066.10

I'm getting an odd error when starting OpenVPS on any container. I've reproduced this with all my templates. I'm following the directions on http://wiki.openvz.org/VPN_via_the_TUN/TAP_device to a T.

Service deferred error: IPTablesServiceBase: failed to run iptables-restore [status=1]:

['iptables-restore: line 40 failed']:

internet/base:1137,internet/base:729,internet/process:45,internet/process:306,internet/_baseprocess:48,internet/process:778,internet/_baseprocess:60,svc/pp:73,svc/svcnotify:25,internet/defer:243,internet/defer:312,internet/defer:328,sagent/iptables:105,sagent/iptables:39,util/error:49,util/error:29

service failed to start due to unresolved dependencies: set(['user', 'iptables_openvpn'])

service failed to start due to unresolved dependencies: set(['iptables_openvpn'])

Any ideas?

Dear Michael,

in my opinion if you feel that the problem concerns OpenVPS you'd better ask on OpenVPS forums/mailling list etc. At least you have much more chances to have your question answered.
