Right then, first post, first time using openvz!

I have a spare server which I haven't used for a while (and still paying for!) so I decided to give openvz a try.

Everything is running fine apart from when I create a new account, I can login to the account (ssh) using the secondary IP but not the main. I've tried all sorts but to no avail.

Any ideas?

Thanks

PS. basic install, no firewalls etc yet.

Running kernel 2.6.18-164.11.1.el5.028stab068.3

EDIT: Just been playing around a bit more, I cant do anything with the IP, could be a resolver issue?
