Just install latest server wiht proxmox 1.5

Usually I use templates for centos get on OpenVZ

On web interface i see template ( i put on my host system's /vz/template/cache

See image

But whe go to create VM only 3 templates appears

See image

I lost.

I don't know Proxmox, but could it be, that your server runs a 32bit kernel?

You can actually create a 64bit VPS on a 32bit host, but it will refuse to start - maybe that is why proxmox won't let you create a 64bit guest (all your CentOS templates seem to be 64bit) in the first place.

Machine it's on mode 64

Linux vz004.islaserver.com 2.6.24-10-pve #1 SMP PREEMPT Tue Dec 29 10:16:15 CET 2009  
x86\_64 GNU/Linux

It's machien for backups. If get a any vdump of other machines (of course all VPS are 64 bits) work fine.

Thnaks for yoy reply. Go to forum Proxmox...
