---

I have a VE with Ubuntu 9.04 installed from an official precreated template ubuntu-9.10-x86.tar.gz with installed ubuntu-desktop package by myself. I'm using FreeNX for remote control of my Ubuntu VE.

Problem: at VE startup I'm receiving "Failed to initialize HAL!" message.

Question: How can I fix HAL to let it work in Ubuntu VE or how can I avoid this problem with HAL, maybe by removeing HAL or substitution it by means of another software?

P.S. Sorry, but I speak english only. Thank you.
