Hello,

I'm creating a new node to migrate about 20 containers from an old server. the old server has centos 5.4 i686, but i want to install x64 on the new one. Since all the vms on old server are using 32bit, is it possible to import them to a new node running 64bit?

thanks in advance.

Hi,

no there's no migration script etc, to change the ct arch x86 to x86_64, but you can use the x86 on a x86_64 as well.

Bye,
Thorsten

Hello,

So, i can import vps in i386 to a x86_64 system? My actual kernel is:

```
2.6.18-164.10.1.el5.028stab067.4PAE #1 SMP Fri Jan 15 02:41:53 MSK 2010 i686 i686 i386
GNU/Linux
```

the new one will be x64.

thanks
