LXC is not a mature solution to replace OpenVZ and the next LTS Ubuntu version is coming soon.

This project is stopped:

<https://launchpad.net/~ubuntu-openvz-dev>

And in the Ubuntu's repositories there only were OpenVZ kernel packages in the 8.04 version, but not in 8.10, 9.04 nor 9.10

Some server administrators with Ubuntu need to wait for a good LXC platform before decide virtualization migrations.
