Hi, I only came here after to try to do this in a lot of ways and take a lot weeks involved.

So it's possible to give to our communita a template with centos with everything necessary to access using Windowns Terminal Service, or another viewer.

It really appears easy but I couldn't do it with rdesktop, NCmachine, NVCviewer...

Thanks a lot!

Carlos

Oi Carlos.

This is not strictly a VE problem, but anyway:

Install any template. Enter the VE. apt-get install kdebase (or yum install kdebase) ou gnome or whatever. Install the 3 packages of nxserver free edition for linux from www.nomachine.com.

Install nxclient, configure and connect.

Easy.

Oi nuno!

Thanks a lot for your help!

And sorry to take time with this kind of issue!

Please any Moderate to Close or delete this topic.

It will not happen again!

Kind Regards,
Carlos Filipe
