Hi all, i want to ask about monitoring OpenVz container with Nagios. Example, I have a host with IP 1.1 using centos 5, and there is four container OpenVZ in that host.

What i want to ask is about, how to monitoring all of that container in that host? Can anybody give me any clue for this?

Thanks

hi curx, thx for response. i was try it:
(http://wiki.openvz.org/Monitoring_openvz_resources_using_nag ios_and_snmp), but i'm stuck when i want to testing snmpwalk.

snmpwalk test:
snmpwalk -v 3 -u myuser -l authPriv -a MD5 -A mypassword -x DES -X mypassword $(hostname -i)

it says :
hostname: Unknown host
No hostname specified.

i was trying to find any clue with google, but i can't find a good one..
