Hello guys, I installed openvz in a fresh install on a Centos 5.4. The server an ATOM 330. The issue is that the container dont have access to a Internet. I reinstall and compile the driver for the Realtek but nothing works and I don't know what more i can do.

When I write in the node [root@22491 ~]# mii-tool it get frozen and i should hand reboot.

How I can do?

- iptables rules loaded on ct0 (=hardwarenode) ?

- ip r l on hardwarenode and for container

Bye,  
Thorsten

Thank you for your reply bro. It was an issue with the ARP records in the router. Thank you.
