Subject: Segmentation Fault with Novell eDirectory

I'm trying to migrate a physical x86_64 SLES 9 server running Novell eDirectory 8.7.3.9 v10553.93. The host node is a CentOS 5 box with OpenVZ kernel 2.6.18-164.15.1.el5.028stab068.9.

I followed the wiki instructions for Physical to Container migration and also had to 'ln -s /proc/self/fd /dev/fd'. When I'm trying to start eDirectory nldap fails with a segmentation fault. strace indicates a bus error. I'm attaching strace output.
