I upgraded the kernel to the latest version and after reboot the containers are not pinging.

I checked /etc/vz/vz.conf
and
NEIGHBOUR_DEVS=all

There are different subnets so I even created route-etho

/etc/sysconfig/network-scripts named
"route-eth0" with content

```
Subnet.0/24 dev eth0  
Subnet.0/24 dev eth0
```

And restarted the vz services and network services.

Still IP's are not pinging.

Thanks

- any tcpdump data, show what going wrong ?
- OpenVZ kernel version ?

Bye,
Thorsten

```
Kernel 2.6.18-164.15.1.el5.028stab068.9 #1 SMP Tue Mar 30 18:07:38 MSD 2010 x86_64  
x86_64 x86_64 GNU/Linux
```

TCPDUMP is showing general connection details only.

how to read the error in tcpdump.

Thanks

I have been facing some what similar issue but its intermittent in our case
<http://forum.openvz.org/index.php?t=msg&th=8445&start=0&SQ=8cf899b9f819e765c6831fbb246c9d31&>

What is the output for below commands :

arp -n

and

route -n

Also what are the details of the hardware you are using ?
