use
Name: ovzkernel
Arch: x86_64
Version: 2.6.18
Release: 164.11.1.el5.028stab068.3

vzctl set 005 - slmmode slm - save
in response to issues
005: unrecognized option ` - slmmode '
although if you specify this option in the config startup VE error does not extradite
but the work is not noticeable SLM something

Service Level Management (SLM) is usable for Virtuozzo only!

Bye,
Thorsten
