I Didnt install The OpenVZ Before

So i want the Best way to install it

i tried with

http://wiki.openvz.org/Install_OpenVZ_on_a_x86_64_system_Centos-Fedora

to install quick install and faild

i want to istall OpenVz and hyperVm On Centos 64

can you Help

i have installed yesterday openvz on my centos5.5 64 bit, and kernel crash

2.6.18-194.3.1.el5.028stab069.5

this is the version of my kernel, im looking why server crash.

Try another kernels:

1. Old ovz kernel
 2. CentOS kernel 5.4
 3. CentOS kernel 5.5
 4. (on some live-cd) last vanilla kernel
