Hello All!

I was following this tutorial,
http://wiki.openvz.org/User_Guide/Installation_and_Prelimina ry_Operations#Disk_Partitioning

When it comes to making the /vz partition i get the following messeage.

Quote:Not enough space
The current requested size (377..... MB) is larger than maxium logical volume size (209..... MB).
To increase this limit you can create more Phyical Volumes from unparitioned disk space and add them to this Volume Group.

Even though the Free Space says i have enough for it, I have attached a screenshot of this.

All help on this would be great!

Regards
Daniel Collins
