Hi,

i've just made a yum-update and updated kernel to
2.6.18-194.3.1.el5.028stab069.5
which gave me some really nice slowdown to USB 2.0 external drive:
[root@watcher ~]# hdparm -tT /dev/sda

/dev/sda:
Timing cached reads: 1948 MB in 2.00 seconds = 973.75 MB/sec
Timing buffered disk reads: 12 MB in 3.08 seconds = 3.90 MB/sec

so i get back to the
2.6.18-164.15.1.el5.028stab068.9
and got the speed back:
/dev/sda:
Timing cached reads: 1780 MB in 2.00 seconds = 889.09 MB/sec
Timing buffered disk reads: 50 MB in 3.04 seconds = 16.45 MB/sec

what could be problem?

Please
(1) file a bug to <http://bugzilla.openvz.org/>
(2) try to reproduce it with a stock RHEL5 (CentOS5) kernel

ok, but i don't believe, i've got enough time to reproduce the bug sorry.
